

TriPlex Meters

Three Phase Amp and Volt Measurements

The Bitronics TriPlex Ammeters and Voltmeters use a microprocessor to calculate true RMS quantities by sampling and digitizing the voltage or current on each phase, several times per cycle. Three-phase and single-phase models are available, all with bright, easy-to-read LED displays. It has a built-in self-diagnostic system and does not require periodic maintenance. Housed in a rugged aluminum 4-inch round case, TriPlex is certified to meet UL and CSA standards on AC powered units.

Features

- Simultaneous display of all phases
- Non-volatile memory requires no batteries for settings retention
- Modular construction simplifies maintenance
- Optional transducer outputs: 0-1mA or 4-20mA
- Push-button, in-field caling
